Purchase Funnel — Sessions Reaching Each Stage

277,837 sessions end without ever viewing a product, 78% of the funnel is gone before anyone sees an item.

Same-Visit Share of Each Stage

The path is intact until checkout, then collapses to **53.7%**. Half of checkout traffic arrives with a cart filled on an earlier visit.

Orders Gained per 1pp Improvement

One point at **Add to Cart** is worth 246 orders, more than View Item, despite View Item losing four times as many sessions.

Checkout Close-Up — the Tail at Full Scale

4,291 sessions are lost before payment details, against 1,967 after. Checkout fails earlier than it fails late. Shipping info omitted as it fires with Begin Checkout on 99.8% of sessions.

Where 15,188 Cart Sessions Stop

Three in five cart sessions **never start checkout**. Parking a cart, not abandoning at payment, is the dominant behavior.

Who Stalls Where, and How Long They Stayed

The shipping stall is **77% first-time buyers**, and time on site climbs 323s to 948s with every step completed.

GA4 Funnel Analysis — Which Channels Actually Work?

Source is the one dimension that predicts whether a session engages — and a third of revenue is credited to the store referring to itself

Three channels carry **84.9%** of revenue from half the sessions, but the largest of them is the store referring to itself.

Referral converts best at **4.44%** and bounces least. Unknown, a quarter of all sessions, bounces at 45% and produces one order, which is why it is left out of the revenue charts.

Referral, Self-Referral and Obfuscated get **three quarters** of their checkout sessions to payment. Direct, Google Paid and Other manage about a third.

92% of Self-Referral is the store's own two hostnames of all sources. \$116,247, or 32% of all revenue, credited to an internal referral.

December peaks at \$160,525. January's 64% fall is partly a tracking gap. From 26 January orders were still recorded but their revenue was not, costing about \$16,000.

Conversion is flat across markets (1.10–1.71%). Only basket size varies, and among the twenty largest markets the US sits mid-table at \$1.02 per session.

GA4 Funnel Analysis — Who Buys, And Where Do They Land?

Repeat visitors are 29% of sessions and 67% of revenue — and a quarter of all traffic lands on three pages that sell almost nothing

270,154

Total Users

1.33

Returning Revenue Share %

New vs Returning: Sessions against Revenue

The proportions invert. **28.5%** of sessions produce **67.5%** of revenue, returning visitors convert at 3.03% against 0.67%.

Value Rises with Every Return Visit

The second visit is the biggest step: buyers go from **0.48%** to **3.10%**. The 17.5% of users who return at all carry 82.2% of revenue.

Entry Page Performance

ENTRY PAGE	SESSIONS	BOUNCE	CVR	REV/SES
Homepage	161,673	26.10%	1.69%	\$1.24
Apparel	40,174	37.21%	0.34%	\$0.30
Shop By Brand > YouTube	25,301	29.37%	0.24%	\$0.08
Apparel > Google Dino Game Tee	18,793	54.41%	0.01%	\$0.00
Store home	14,972	37.35%	0.69%	\$0.51
Apparel > Mens > Mens T Shirts	7,237	17.15%	0.66%	\$0.32
Lifestyle > Drinkware	5,746	47.89%	0.78%	\$0.53
Apparel > Mens	5,502	38.51%	2.58%	\$2.49
Sign in	4,313	28.24%	2.06%	\$1.41

The Apparel page returns **\$0.30** a session; its Men's subcategory returns **\$2.49**. Broad landing pages underperform the specific ones beneath them.

Traffic against Revenue, by Entry Page

Apparel, the YouTube page and the Dino Game Tee take **23.4%** of traffic and return 3.9% of revenue. Basket does the reverse on 1.2%.

Device Explains Nothing — Three Bounce Definitions

Bounce moves **0.26 points** across devices under three definitions, against 20 points across channels. Device is not a lever here.

The Gap Widens Through the Funnel

Returning visitors lead by 1.3x at product view, 2.3x at checkout and **4.5x** at purchase. The advantage compounds.

GA4 Funnel Analysis — What Are They Buying?

Apparel is 47% of item revenue across 95 products — and the category field it sits in is not reliable

\$362,110

Total Item Revenue

4,846

Total Orders

\$74.72

Category AOV

22,720

Total Quantity

4.69

Items per Order

\$15.94

Avg Unit Price

Category Revenue

Apparel is **47.4%** of item revenue — more than the next six categories combined.

Top 7 Products by Revenue

No product exceeds **3.81%** of revenue and the top seven together are 18.9%. The catalogue earns broadly, so "promote the bestsellers" is the wrong reading.

Category Mix by Month

Apparel falls from 52% to **41.7%** of December revenue as buyers spread into Bags and New. Its unit price is flat all window, so this is gift-buying mix, not discounting.

Channel by category

Channel	Accessories	Apparel	Bags	Campus	New	Uncategorized
Self-Referral	5.0%	46.0%	7.8%	5.1%	7.5%	4.4%
Referral	5.1%	52.0%	5.7%	5.1%	5.6%	4.8%
Other	3.1%	51.7%	8.3%	6.8%	7.3%	4.8%
Obfuscated	2.8%	46.6%	7.8%	5.5%	7.3%	4.2%
Google Paid	3.7%	44.5%	8.7%	4.2%	5.0%	8.1%
Google Organic	5.0%	46.1%	5.5%	6.1%	7.1%	5.3%
Direct	6.0%	44.9%	6.5%	5.9%	9.7%	4.3%

Every channel sells the same catalogue — Apparel is **44.5% to 52.0%** of each one's revenue. The order-value gaps on page 2 are not a mix effect.

How Much Each Category Rests on One Product

Apparel carries 47% of revenue across 95 products with none above **8%**. Shop by Brand is half one product. Size and risk are unrelated.

What the Category Field Cannot Tell You

\$24,713 sits in categories that name nothing, and the ten largest products each appear under two or three. Category totals are approximate; the product ranking is not.
